Python-ala1 report

AIM:

INCORRECT CODE:

```
print("Electricity Bill System")
units = int(input("Enter units consumed: "))
if units <= 100:
bill =
elif units
bill =
units *
<= 300:
units *
5
7
elif units
bill =
> 300:
units * 10
tax = bill * 5 / 100
total = bill + tax
print("Bill:", bill)
print("Tax:", tax)
print("Total:", total
if total > 2000:
print("High bill")
else:
```

print("Normal bill")

CORRECT CODE:

```
print("Electricity Bill System")

units = int(input("Enter units consumed: "))

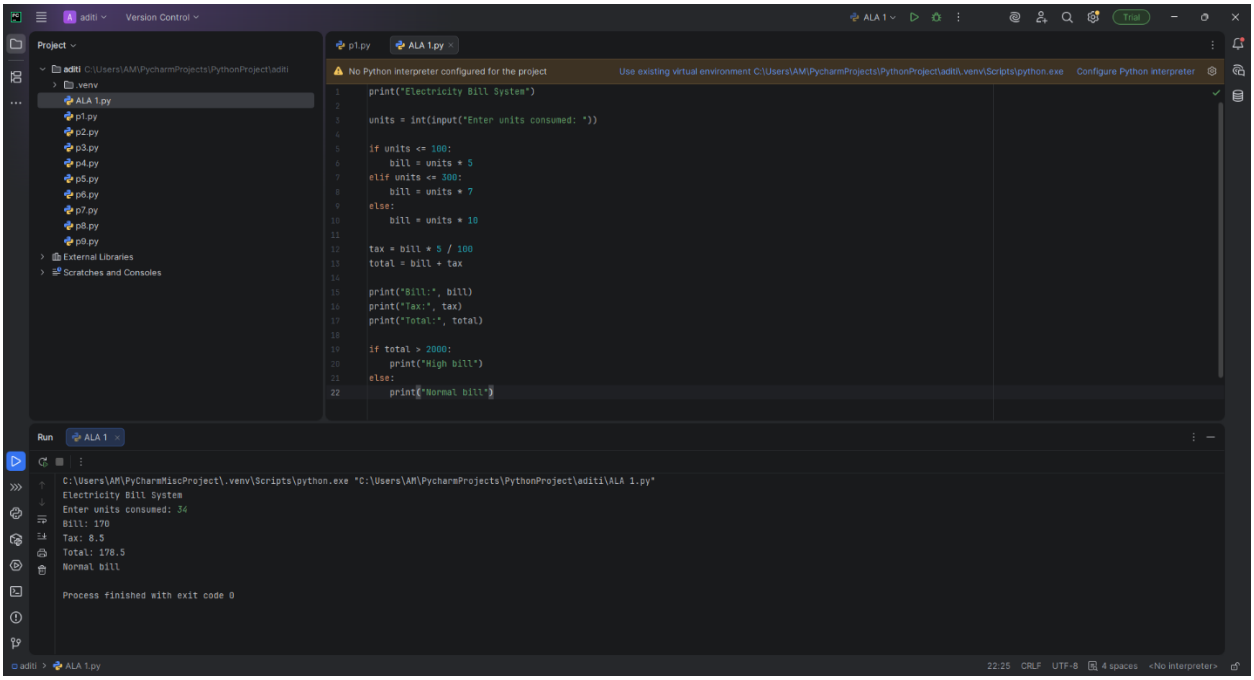
if units <= 100:
    bill = units * 5
elif units <= 300:
    bill = units * 7
else:
    bill = units * 10

tax = bill * 5 / 100
total = bill + tax

print("Bill:", bill)
print("Tax:", tax)
print("Total:", total)

if total > 2000:
    print("High bill")
else:
    print("Normal bill")
```

OUTPUT :



ERRORS IN CODE:

Total Errors in Code: 9 Errors:

---

1. bill = **(empty assignment)**

You wrote:

bill =

Error: No value assigned.

---

2. elif units **(incomplete condition)**

You wrote:

elif units

Error: Condition is incomplete.

---

3. <= 300: **written on next line**

You split:

elif units
<= 300:

Error: Condition must be on same line.

---

4. units * **incomplete expression**

You wrote:

units *
5

Error: Expression broken into wrong lines.

---

5. Same mistake again in next block

elif units
bill =
> 300:

Error: Condition and structure completely wrong.

---

6. bill = **again empty**

Second time missing value.

---

7. > 300: **written separately**

Condition is not attached to elif.

---

8. Missing closing bracket

print("Total:", total

Missing)

---

9. Indentation problem

The if total > 2000: block is not properly indented under previous code.
